

## Acrylic Social Distance Screen

Please follow the instructions to install your screen.

Your screen will arrive packaged up, when you open it, you will see brown backing paper, protecting the clear acrylic.

Work out where you want to position your screen on the counter. You may want to put a small mark on the outer edges so that it is easy to position once you have the double sided tape in place.

Clean the bench area and ensure it is dried off.

There will be a small bag with double sided tape attached. Remove the bag and put it to one side.

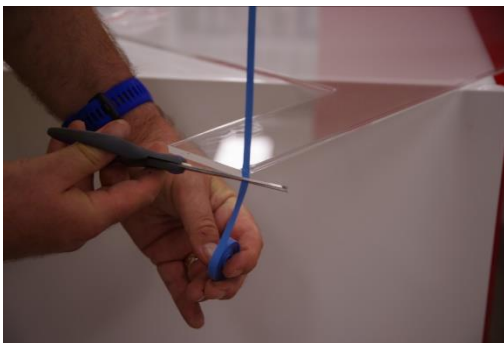

Find the corner of the protective backing paper and remove it carefully.

It may take several attempts to remove the backing.

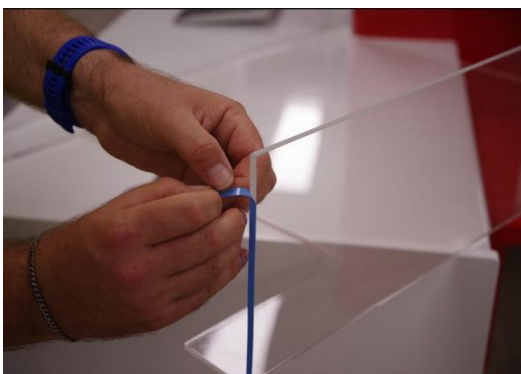

Get the double sided tape and carefully run it along the edge of each of the underneath sides of the screen (the underneath side is the one that has the cut out in it for items to be passed through).

Cut the tape with scissors to the desired length. Keep the blue backing on the tape until all four pieces are in place. Store the extra tape in the bag provided.

There are additional lengths included, in case you want to move the screen.

Carefully peel the blue backing tape off. Being careful not to touch the tape.

Have two people lift the screen into position. It works best if you have someone at the front of the counter and the other person behind it. Carefully place the screen into position. It will stick to the surface instantly.

Gently push it forward to make sure that the screen is secure on the counter. If you are unhappy with the screen position, you can repeat the steps with the additional tape that you have.

We recommend wiping the screen down after installation and in line with your cleaning practices thereafter.

Your screen is now ready for use.
