Total %	360	181 50%		130 36%	51 14%	116 64%	64%

Notes

This summary is based on the mapping data

Channel height is directly linked to the best channel based on the dimensions provided by the suppliers

The recommendation of what stays in the same channel, is based on the dimensions and not what is set up in individual machines

The fastest mover data is based on the averages across multiple sites, for a pharmacy with smaller machines, some of these drugs may be in your slow mover drawers
